PRODUITS OU MACHINES

Supplier of Glass processing machines

Cutting Technique

machines for cutting flat glass from manual to NC-controlled

The products span a range from simple manual cutting machines to CNC controlled cutting lines for glass from 1000 x 2200 mm to 6000 x 3250 mm.

For economical cutting of many large glass sheets of the same size we deliver two-bridged cutting tables. The entire glass sheet is cut with two cutting bridge movements. This cutting machine type is available as Cutting Machine 215-MAN for manual cutting.

Vacuum Handling Technique

for lifting, holding and transporting concrete, glass, synthetic materials, metal, stone and also lead blocks of a temperature up to 180° centigrade
special frame for roof and wall panels for industrial construction

In the field of vacuum handling technology you'll find that we have the largest and widest product range available world-wide.

We manufacture a range of vacuum lifting devices: for small weights up to the transport of several thousand kilograms. Even the installation of 12 x 5 m façade elements weighing approximately 2,800 kg has been achieved without any problems using our technology. Glazing under roof projections is not a problem for our special devices. With the right products it is possible to handle weights of up to 1,200 kg even if the elements are curved.

We hold a top position world-wide for putting the latest safety requirements into action. Our devices from this model range have two independent vacuum circuits with all the warning devices required by the safety norms EN 13155 and draft norms EN 13035-1 and EN 13035-2.

And of course we offer manipulating devices for maximum transport weights up to 1000 kg for the production.

Besides the many devices for glass processing we offer no end of solutions for the transport of metal sheets, stone plates, gypsum wallboards and plastic boards. Special ways of constructing vehicles or for moving windows with mounted roller shutters round out our product range.

Over 200 different solutions have been developed with our expertise during the last ten years alone. Our decades of experience are instrumental in finding solutions to new problems.

Tools, Glass Loading Frames and so on

glazier tools, suction handles and devices for flat glass processing
